BERC 2014 "NATIONAL LIST OF MEDICINAL PLANTS IN PALESTINE - WEST BANK & GAZA STRIP"

Abstract

A systematic review was carried out in Palestine on studies that contained a list of medicinal plants that were known and/or used in Traditional Arabic Palestinian Herbal Medicine (TAPHM) as part of complementary and alternative medicine (CAM) and that provided a list of the therapeutic indications of the species as well as presenting the scientific names of these species. The resulted inventory (BERC 2014 "National List of Medicinal Plants in Palestine - West Bank and Gaza Strip") comprises 368 plant species with their Latin name, Family name, English name, Arabic name, geographical region, growth form, abundance, blooming time, and the references that cited the plant. This national inventory of medicinal plants is expected to serve as a reference on herbs used in TAPHM.

Introduction

In Palestine, like in many developing countries, medicinal plants play an important role in primary health care and are widely used as complementary and alternative medicine (CAM) in the Traditional Arabic Palestinian Herbal Medicine (TAPHM), for the maintenance of health, and for the treatment of various illnesses including chronic diseases (Ali-Shtayeh et al., 2011, 2012, 2013a). The aim of this study was therefore aimed at developing an updated national inventory of medicinal plants (Ali-Shtayeh & Jamous, 2006, 2008) that will serve as a reference on medicinal plants utilized in TAPHM, their growth form, geographical regions, endemism, abundance, and blooming time.

Methods

The present study was based on a research review, focusing on the results of primary research carried out in Palestine (West Bank and Gaza). The objective is the integration of the results to carefully generalize the findings. Thus, a comprehensive search was conducted of articles from the ethnobotanical literature in Palestine

concerning medicinal plants or general ethnobotanical articles that included medicinal use, among other types of use.

The search used the keywords “Medicinal plants + Palestine”, “Ethnobotany + Palestine”, “Ethnopharmacology + Palestine”, and Palestine + CAM-related keywords (CAM, complementary/alternative/integrative medicine, traditional medicine, ethnobotanical survey, herbs, herbal, nutritional/dietary supplements) in the major data bases and publishers of scientific journals (HINARI, ScienceDirect, Scopus, Scirus and Scielo). The search was performed from Jan 2013 to Feb. 2014. For each paper found, its references were analyzed with the aim of identifying additional studies that were not uncovered using the established search criteria. Even studies that were not available online could be included, since we could find them in the libraries of research institutions and universities. After the articles had been found, they were filtered based on the following inclusion and exclusion criteria.

This systematic review included only studies that contained a list (partial or total) of medicinal plants that were known and/or used in Palestine and that provided a list of the therapeutic indications of the species as well as presenting the scientific names of these species. Only taxa that were identified to species level, and reported by 3 informants or above, were considered. The scientific names of the species were updated using the data base Flora of Israel Online (<http://flora.huji.ac.il/browse.asp?>; <http://ww2.bgbm.org/EuroPlusMed/query.asp>), and the list of Palestinian floral species (*Flora Palaestina*, 1966-1986). These same lists served as the basis for classifying species as native or exotic to Palestine and native or exotic species for each ecosystem, or for additional information on the origin of the species and habit classification.

PA = Parasite	GS = Gaza Strip	PDM = Palestine + Jebel	
Q = Aquatic			

Conclusion

The "BERC 2014 National List of Medicinal Plants in Palestine - West Bank and Gaza Strip", comprises 368 plant species with their Latin name, Family name, English name, Arabic name, geographical region, growth form, abundance, blooming time, and the references that cited the plant. This national inventory of medicinal plants is expected to serve as a reference on herbs used in TAPHM.
